

ABSTRACT

Disaster Management Act, 2005 - COVID-19 - Demarcation of Containment Zone to Control Corona Virus - Guidelines and List of Containment Zone - Notification - Issued.

REVENUE AND DISASTER MANAGEMENT(DM-II) DEPARTMENT

G.O.Ms.No.221

Dated :04.05.2020

சார்வரி சித்திரை 21
திருவள்ளூர் ஆண்டு 2051

Read :

1. Go.Ms.No.217, Revenue and Disaster Management (DM-II) Department, dated 3.5.2020.
2. From the Health and Family Welfare Department, Proposal dated 3.5.2020.

ORDER

The Notification on Guidelines for Demarcation of Containment Zone to Control Corona Virus and List of Containment Zones are annexed to this order shall be published in the **Extraordinary Gazette dated 4.5.2020**, under Disaster Management Act, 2005.

(By order of the Governor)

K. SHANMUGAM
CHIEF SECRETARY TO GOVERNMENT

To

The Works Manager, Government Central Press, Chennai
(With a request to publish in Extra Ordinary Gazette dated 4.5.2020 and send 50 copies to Government)

The Secretary to Government, Health and Family Welfare Department, Chennai-9.

All Additional Chief Secretaries, Principal Secretaries and Secretaries to the Government, Secretariat, Chennai.

The Principal Secretary/Commissioner Revenue Administration, Chennai.

All the District Collectors.

The Hon'ble Chief Minister Office, Chennai.

The Private Secretary to Chief Secretary to Government, Chennai.

//Forwarded//By Order//

Shanmugam
4/5/2020
SECTION OFFICER

NOTIFICATION

Guidelines for Demarcation of Containment Zone to Control Corona virus

SARS COV-2 virus causes COVID-19. Corona virus infection spreads from person to person directly through respiratory droplets produced when an infected person coughs and sneezes (<20% of transmission). People also become infected by touching surfaces frequently touched by hands (>80 %).

It is important to ensure we identify pockets of critical interventions for a focused management of Covid 19 at field level. A district will be considered under Green Zone, if there are no confirmed cases so far or there is no reported case since last 21 days in the district. The list will be revised on a weekly basis or earlier and communicated to States for further follow up action in consonance with the directions issued by Ministry of Home Affairs under the Disaster Management Act'2005. The List of the districts as per above classification is attached herewith in Annexure. It is further highlighted that based on field feedback and additional analysis at state level, States may designate additional red or orange zones as appropriate. However, States may not relax the zonal classification of districts classified as red/orange as communicated by the Ministry. For the districts having one or more municipal corporations, the corporations and other areas of districts may be treated as separate units. If one or more of these units have reported no cases for last 21 days, they can be considered as one level lower in zonal classification, in case the district is in Red/Orange Zone. District authorities should, however, exercise due caution in such areas so that these areas remain free from COVID19 cases. It is critical to ensure that necessary action for containment so as to break the chain of transmission of virus is initiated in both red and orange zone districts reporting confirmed.

The containment zones in these districts have to be delineated based on:

- Mapping of cases and Contacts
- Geographical dispersion of cases and contacts
- Area with well demarcated perimeter
- Enforceability

Depending on above factors, for urban areas - residential colony / Mohallas / municipal wards or police-station area / municipal zones / town etc., as appropriate can be designated as containment zones. Similarly, for rural areas – villages / clusters of villages or group of police stations/ gram panchayats/blocks etc., as appropriate can be designated as containment zones. The area should be appropriately defined by the district administration/local urban body with technical inputs from local level. In the spirit of effective containment, it is advisable to err on the side of caution. Further, a buffer zone around containment zone has to be demarcated.

Necessary action should then be initiated in these areas as part of the containment Action Plans already communicated including-

- Stringent Perimeter control
 - Establishing clear entry and exit points
 - No movement except for medical emergencies and essential goods & services
 - No unchecked influx of population
 - People transiting to be recorded & followed through IDSP
- Active search for cases through house to house surveillance by special teams formed for the purpose
- Testing of all cases as per sampling guidelines
- Contact tracing
- Clinical management of all confirmed cases

Similarly, in buffer zones, extensive surveillance for cases through monitoring of ILI/SARI cases in health facilities has to be taken up.

Strategies for Corona Virus Infection Prevention and Control

1. Strategies to prevent the entry of the virus into a country or state or district or in a local area include thermal screening, entry and exit hand wash, self quarantine, hospital isolation of persons with symptoms.
2. Respiratory Hygiene including remaining inside the home when anyone has cold, cough, fever, sneeze after getting medical advice and test for COVID-19, cough etiquette, hand washing and surface cleaning and disinfection practices including hospitals, public transport and similar locations.

3. Avoiding all kinds of mass gatherings
4. Effective seamless lab-based surveillance by testing all severe Acute Respiratory Illness (SARI) cases, Influenza Like Illnesses (ILI), contact testing, testing people with low immunity.
5. If tested positive, isolation and admission in COVID hospital as per doctor advise.
6. Isolation and treatment of positive cases in hospitals and based on the experience and need, steady strengthening of hospital capacity both in Govt sector and private sector, including the separation of fever OP and IP from other hospital services.
7. Special care for pregnant mothers and children and special arrangements for the hospitals catering to special patient groups like cancer, geriatrics, transplants and other similar categories.
8. Home quarantine/ facility quarantine of high-risk contacts.
9. Secluding senior citizens from younger people by creating awareness, back to village homes at least for next six months.
10. Indian system of medicines for boosting immunity among patients, contacts, high risk population groups.
11. Localised containment and lock down strategies

Strategies aimed at Delaying the spread

- Essentially for any kind of Influenza Like Illness (ILI) the strategy is delaying the spread of the infection in the community as much as possible, since it will enable the society, government and health care system to get prepared to handle the situation.
- Broader flattened epidemic curve is the goal since it will enable the younger society to develop herd immunity and in the process the lightning ability of the virus will be severely crippled.

Containment Strategies

1. General Principles

- Prevention of further spread in the locality by restricting the movements and implementing all known scientific interventions is the key objective of containment strategy
- Although administrative units are preferred, case patient movement and local epidemiology are the factors to be considered for deciding the locations/areas to be brought under containment zone.
- If administrative units overlap with each other, all concerned local bodies should be involved in containment operations.

1. Single or less than 5 Positive Cases

1.1. Village Panchayat

In the village panchayat, village (habitation/hamlet) containing the residence of positive case is demarcated as containment zone.

- If the individual stayed in a village (habitation / hamlet), such village (habitation / hamlet), may be brought under containment zone. If the positive cases spread across village panchayat, the concerned village panchayat will be brought under containment zone.
- If the residence happens to be at the border of the concerned village panchayat, then neighbouring village also be included in containment zone.
- The Block Medical Officer, Block Development Officer, Block Health Supervisor after a rapid appraisal of the case and geographical situation in consultation with the DDHS can decide the number of villages to be brought under containment zone.

1.2. Urban Area (Corporation/Municipality)

- The street containing the residence of the positive case is demarcated as the containment zone.
- If the street is very long a reasonable stretch to be brought under containment to restrict movement.

- If the residence happens to be the corner of the street, then the adjoining street also be included in containment zone.
- Quick aerial view from the roof top a nearby high rise building and rapid appraisal of the movement of the positive case and local people, City Health Officer and Commissioner.

1.3.Urban Area (Town Panchayath)

- The street containing the residence of the positive case is demarcated as the containment zone.
- If the residence happens to be the corner of the street, then the adjoining street also be included in containment zone.
- The Block Medical Officer, Executive Officer of the Town Panchayath and Block Health Supervisor after a rapid appraisal of the case and geographical situation in consultation with the DDHS can decide the area to be brought under containment zone.

2.Cluster of Cases: If there are five and more positive cases in a locality then it will be considered as clusters.

2.1.VillagePanchayat

- If a number of cluster falls in a village or group of villages then group of such villages can be brought under containment.
- The Block Medical Officer, Block Development Officer, Block Health Supervisor after a rapid appraisal of the cases and geographical situation in consultation with the DDHS can decide the number of Village Panchayats to be brought under containment zone.
- In a block with larger geographical area, sparse population and distance between the case village / hamlet / habitation and other surrounding village / hamlet / habitation is more than two kms and there is no movement between the affected villages, containment areas can be restricted to a group of affected villages.
- In case of thickly populated blocks with smaller geographical area like the suburban blocks the whole block may be brought under containment.

- If the cluster happens to be at the border area of a block, then the adjoining block also be included in the containment zone.

2.2.Urban Areas (Corporation/Municipality/Town panchayat)

2.2.1.Corporation:

- If the cluster falls within the Ward, then the Ward in which the residences of the positive cases are located should be demarcated as the containment zone.
- If the residence happens to be the border of the ward, then the adjoining wards may also be included in containment zone.
- Quick aerial view from the roof top a nearby high rise building and rapid appraisal of the movement of the positive cases and local people, City Health Officer and Commissioner.

2.2.2.Municipality:

- If the cluster falls within the Ward, then the Ward in which the residences of the positive cases are located should be demarcated as the containment zone.
- If the residence happens to be on the border of the ward, then the adjoining streets may also be included in containment zone.
- Quick aerial view from the roof top a nearby high rise building and rapid appraisal of the movement of the positive cases and local people, City Health Officer and Commissioner.

2.2.3.Town Panchayat:

- The whole Town Panchayat where the clustering of cases happens is demarcated as containment zone.

3.Gated Community/ Hostels/Apartments

- Epidemiological factors should be taken into consideration before deciding on the strategies
- Housing design, number of people living/ working/ visiting, floors, transport and other epidemiological factors should be considered
- DDHS and District Collector/ City Commissioner should directly take charge and decide the strategies

4. Surveillance Zone (Buffer Zone)

- In rural area 0.5 kms radius can be demarcated as buffer zone and in urban area buffer zone to be earmarked based on the geo spatial spread & ground realities.
- Extensive mike announcement should be done around five kms area for reporting of ILI and SARI cases.
- Surveillance should be intensified in all local clinics/hospitals/PHCs/major hospitals for ILI and SARI based on the health care service utilisation pattern in that particular area.
- Cross notification and enquiry even in neighbouring districts will be of use.

Scaling down

- The containment operations shall be deemed to be over 28 days, if no active cases in the zone and from the confirmation of last positive case in the containment zone.
- In Cluster case reported containment zones, areas can be released partially also depending on the local geographical situation and population movement.
- At least one dedicated team of a medical officer and Health Inspector should monitor the area for 28 days from the date of negative test of last positive case.
- Surveillance and other routine activities should be continued as per guidelines with additional care routinely.
- In rural area with 0.5 kms as radius & in urban area the buffer zone can be created as per the Geospatial spread as per administrative convenience.

Containment Zone as on 02.05.2020
